EDUCATION

University of Waterloo

Sep. 2023 - Apr. 2028

Bachelor's in Data Science

Waterloo, ON

Minor: Combinatorics and Optimization

Relevant Courses: Data Structures, Algorithms, OOP, Statistics, Linear Models

SKILLS

Languages: Python, Java, C/C++, Typescript, Javascript, C#, R, SQL, Bash

Libraries: React, Express, jQuery, Pandas, NumPy, Matplotlib, Scikit-learn, TensorFlow

Tools: Spring, PowerBI, MySQL, MongoDB, Linux, Git, Google Cloud, AWS

EXPERIENCE

Machine Learning Engineer | [Showcase](#)

Jan. 2026 - Apr. 2026

City of Edmonton - Future Cities Institute

Edmonton, AB

- Developed CityVision, a traffic monitoring project funded by Mitacs, aiming to assisting Edmonton's traffic management and saving **\$20,000** for the city.
- Implemented an interactive app using **React** and **Python**, utilizing **OpenCV** with **RF-DETR** model to count vehicles and calculate their speed for **20+** case studies.
- Enhanced speed measurement accuracy by **72%** by calibrating intrinsic and extrinsic parameters to perform 3D reconstruction, transforming perspectives into Bird's Eye View.
- Containerized the entire pipeline using **Docker** and deployed to **GCP Compute Engine**, ensuring environment consistency across development and production stages.

Fullstack Developer

May. 2025 - Aug. 2025

Association of Korean Canadian Scientists and Engineers

Waterloo, ON

- Led the **team of 6** to develop the official AKCSE website using **Express** and **MongoDB**, improving accessibility to career and academic help resources for students.
- Optimized query efficiency and database scalability by **42%** through implementation of **dynamic CRUD**, while implementing **authentication** and access control features to strengthen data security.

PROJECTS

Fullstack Academic Management System | *Spring, Javascript, HTML/CSS, MySQL, jQuery, Bootstrap* | [GitHub](#)

- Built a full-stack academic management web app of **20+** pages with **50+** users using **Spring** and **MySQL**.
- Distributed project on **AWS EC2** with **Apache Tomcat**, with optimized database schema and RESTful APIs.
- Implemented **10+** essential features, **CRUD** operations of course postings and assignments, self implemented real-time chat, custom course search filters, and dynamic operations and views with the database.
- Reduced query response time by **30%** using nested SELECT statements to handle grouped ID increments.
- Ensured reliability with **200+** test cases and resolved issues such as multiple PK, time zone mismatches.

Computer Vision Football Analytics | *Python, OpenCV, Pandas* | [GitHub](#) | [Link](#)

- Developed a football analysis system using **YOLOv11** and fine-tuned with **10,000+** images to detect players, referees, and the ball, achieving **0.877** mAP50 with 35.7 ms per-frame latency.
- Implemented **K-means clustering** to automatically assign players to their team, according to their jersey colors.
- Enhanced players' metrics accuracy by **27%** by engineering **camera movement compensation** feature using **Optical Flow** to track metrics consistently even on camera moving environment.
- Deployed services on **AWS EC2** with **SQS**, and built a **Next.js** web app for video upload and real-time analysis.

Biquadris Game | *C++, X-Window* | [GitHub](#)

- Led a team of three to develop a non-real time Tetris as a CS246 final project, using **C++** with OOP design.
- Built a visually responsive game board with real-time score tracking and piece previews using **X-Window**.
- Conducted **500+** test cases to ensure stability and reliability to reduce runtime errors during play sessions.

Personal Portfolio Website | *Typescript, React, SASS* | [GitHub](#) | [Link](#)

- Developed a personal portfolio website using **Typescript** and **React** to showcase professional skills and projects.
- Designed a modern portfolio website using **SASS**, including responsive layouts, for better user experience.
